

Stakeholder involvement

Stakeholder analysis

- Useful tool to map stakeholders who might influence the project
- Point out ambassadors for the project
- Make the analysis during the project – new stakeholders might pop up

Use a neutral facilitator to chair working groups.

Engage and motivate stakeholders

- Encourage stakeholders to actively take part in the project. Ask what they can offer to the project
- Use stakeholder competences in the project actions. Ex. Local hunters for fox regulations

Engagement and successful implementation of the project needs time and people = finances

It is difficult to be completely clear during the preparation of the application about approaching the stakeholders during and after the life project. Flexibility is needed
